to explain how binary numbers (0's and 1's) are represented in a video, we break down how a 1-bit ALU is designed for the Arithmetic and Logic Unit (ALU). In this video we go over the design for the ALU, which is a fundamental component of a processor. The ALU performs arithmetic and logic operations on data. The video shows the internal structure of the ALU, including the use of multiplexers and logic gates to perform operations like addition, subtraction, and logical AND/OR. It also discusses how the ALU is controlled by a set of control signals.
