This is one of a series of videos where I cover concepts relating to digital electronics. In this video I talk about the NEW AND IMPROVED logical redstone series here! In this video I go over basic multiplexers and In this video, we dive into the world of autoencoders, a fundamental concept in deep learning. You'll learn how autoencoders work. Learn about watsonx: An autoencoder is an unsupervised learning technique, but what does that mean? This video is an excerpt taken from our Generative AI Nanodegree program: An autoencoder is a type of neural network that is used to learn the underlying structure of data. It does this by taking an input and producing a reconstruction of that input. The process of learning the underlying structure is called encoding, and the process of producing the reconstruction is called decoding. Autoencoders are used in a variety of applications, including image compression, anomaly detection, and generative modeling.
